

AD·Bio
plastics

3D printing filament - PriXbio

Technology	Melt Flow index (MFI)
	PriXbio 1 4-6 g/10min (190°C)

Applications

Possible replacement material

Neat PLA, PETG, ABS

Advantages/highlights

- Better productivity than neat PLA
- Good processability by the same equipment
- High filament quality
- 3D printed end-product has a good finishing
- Successful printing at 50% density of the fixing piece
- Prints faster than PETG

Transformation Technology

Filament extrusion + 3D printing
